EXPERIENCE

Flo Mobility Pvt Ltd, HSR Layout, Bengaluru, Karnataka, India—Robotics Engineering Intern

June 2024 – July 2024

- Created industry-grade URDF models for 2 variants of the Material Moving Robot (MMR) platform, optimizing meshes using convex hull decomposition.
- Designed and simulated a realistic sand dune terrain in Gazebo, enabling validation across 3+ autonomous navigation scenarios.
- Deployed and tuned the ROS2 navigation stack (Nav2) in Gazebo, optimizing costmaps and localization to achieve 90%+ reliable autonomous navigation.

KarthiKesh Robotics Private Limited, Remote—Robotics Engineering Intern

January 2025 – February 2025

- Gained hands-on ROS2 expertise by developing 3+ custom nodes and implementing publisher-subscriber architecture for robotic control systems.
- Built 5 AMR simulation scenarios in Gazebo testing autonomous navigation across warehouse, outdoor, and obstacle-rich environments.
- Collaborated with a 3-member engineering team to validate and debug robot behaviors.

EDUCATION

B.E. in Robotics and Automation (CGPA - 8.67) | Sri Ramakrishna Engineering College | Coimbatore November 2021 – May 2025

Minor in Internet of Things (CGPA - 8.37) | Sri Ramakrishna Engineering College | Coimbatore November 2021 – May 2025

TECHNICAL SKILLS

Robotics: ROS2, Nav2, MoveIt2

Simulation: Gazebo, NVIDIA Isaac Sim, Genesis

Programming: C++, Python

Hardware: Jetson Nano, Raspberry pi 5

UI & Tools: Flutter, Docker

CAD & Design: Fusion 360, SolidWorks, Blender

AWARDS

Certificate for Japanese | Department of English (SREC) August 2021:

Achieved Subject Topper distinction in Foreign Language program (Second Semester 2021-2022)

Best final year project | Department of Robotics May 2025:

Recognized as the Best Final Year Project for innovation and technical excellence in automating intra-facility logistics using ROS2.

IEEE paper publication | ICCRTEE May 2025:

Presented a simulation paper on the "Smart In-House Logistics via ROS Environment" at Kalasalingam Academy of Research and Education.

PROJECTS

Smart in-house Logistics Via ROS Environment (NIKIRO),

September 2024 – May 2025

- Designed and deployed an autonomous mobile robot integrating MyCobot 280 Jetson Nano with the ROS2 navigation stack for logistics automation.
- Engineered a Flutter mobile application integrated with ROS2, enabling real-time telemetry streaming (pose, velocity, battery status), remote robot control, and live occupancy map visualization during autonomous navigation.

A Digital Twin for Mycobot 280 JN,

January 2024 – May 2025

- Implemented a high-fidelity digital twin of MyCobot 280 in NVIDIA Isaac Sim, integrating ROS2 for synchronized simulation and hardware-in-the-loop validation.
- Built photorealistic 3D robot models and environments using Fusion 360, Blender, and Adobe Substance Suite.

Scavenger and disinfecting robot,

June 2022 – May 2023

- Engineered remote-controlled mobile robot featuring a 5-axis arm for autonomous area cleaning and disinfection.
- Designed and fabricated robot chassis and arm using Fusion 360 and SolidWorks

LANGUAGES

English, Tamil, Japanese, and Mandarin
